## Why Your Company Needs ScreenSafe

ScreenSafe is a Windows software only solution that allows a transportation department to limit the drivers' ability to type while driving. The onboard keyboard can be either Partially or completely disabled when the vehicle exceeds a Specific speed. ScreenSafe does not interfere with any Applications running on the computer in the background.

Utility and transportation departments can now ensure their existing safety policies are being implemented by their drivers in the field. Drivers can also, if you desire, be restricted to using a single application while driving (i.e. routing). You can block YouTube, Google, email and all other applications while the vehicle is in motion.

**For a fraction of the cost of settling a single distracted driving accident you could equip your entire fleet with ScreenSafe. With ScreenSafe, you can ensure your drivers are not only complying with departmental safety policies, but also are not putting the community or your company at risk.**

## The three versions of ScreenSafe are Standard, Pro & Elite

STANDARD

ScreenSafe will disable the Screen and Keyboard when the vehicle is in motion.

\$85/Vehicle

PRO

Ability to Customize the speeds and parameters for disabling the Screen, Keyboard and/or Touch Screen . Includes many features and reports.
