

Keeping Drivers Safe by Eliminating Driving Distractions

Technology has created an increasingly mobile and productive business environment. Laptop computers are an asset to today's mobile work environment, but they are a tremendous liability if used while trying to operate a vehicle. Use of a laptop in a moving vehicle, which is illegal in many states, can cause increased accidents, higher insurance premiums, and lawsuits. ScreenSafe® provides Fleet Managers with a software solution that solves this problem.

ScreenSafe is a Windows software application that disables the monitor upon vehicle movement and eliminates "Driver Distraction". The ScreenSafe application is customizable allowing the Fleet Manager complete control over when to disable the monitor. ScreenSafe reports are uploaded when the laptop connects to a communications network or the internet.

- **Easy to Install and Manage**
- **Very Affordable (GPS antenna included)**
- **Fleet Manager: Custom Limits & Rules**
- **Complies with State Distracted Driver Laws**
- **Driver Cannot Override System**
- **Web Based Reporting Available**

Key Features

- Customization of Vehicle Operation Parameters
- Customization of Screen Disable/Enable Speed
- Customization of Driver "Quick Peek" option
- Parameter Settings under Fleet Manager' control
- Law Enforcement Compliance Screen
- Uninstall Restricted to Fleet Administrator

Web Reporting

- Maximum Daily Speed
- Vehicle Daily Start Times
- Vehicle Daily End Time
- Total Driving Time
- Number of Inactive Computers/Vehicles
- Daily Alerts of Policy Violations
- Unused ScreenSafe Licenses
- Web Reporting is an Optional Upgrade

Real Time Alerts*

- Real Time Email Alerts Notification Available
- Vehicle Excessive Speed
- Attempts to disable ScreenSafe application
- State Boundary crossing
- U.S. Border crossing
- Vehicle operation without GPS attached
- GPS disconnect while vehicle is moving

* Real Time Alerts require the computer to be connected to the internet or a wide area network

Why Your Company Needs ScreenSafe

The NHTSA has stated that 80% of all accidents are caused by distracted Drivers. This resulted in over 2 million injuries last year with over \$180 million in damages. As of January 2009, thirty-four states restrict the use of a monitor or display in a moving vehicle. California and Illinois have recently passed laws prohibiting the use of a computer with a monitor that is visible to the driver without a screen disabling application like ScreenSafe.

A vehicle traveling at 60 MPH is moving at 88 feet per second. Glancing for 3 seconds at a laptop screen will allow the vehicle to travel 260 ft. without the driver looking at the road. This is a distance of over 15 car lengths. The risk and liability of a company allowing their drivers to operate under these conditions significantly increases the likelihood of an accident and a liability claim. Distracted Driver Liability judgments were, on average, 3.5 times the actual cost of the damage incurred.

Without ScreenSafe, it is impossible to testify in court that the driver's laptop was 100% unusable and did not contribute to the accident. Simply making policy is not enough; know the policy is being enforced and all of your drivers are operating their vehicles safely with ScreenSafe.

Quick Return on Investment

Minimizing expenses is not the only concern for a Fleet Manager. Fleet Managers need to ensure that fleet vehicles not only comply with state and local laws, but that your drivers are not operating the vehicles in a manner that puts your company at risk of a multi-million dollar lawsuit. ScreenSafe allows the Fleet Manager to, with a modest investment, ensure all company vehicles are operated in compliance with company policies related to the safe use of computers. For less than the cost of a single traffic ticket for non-compliance, a Fleet Manager can equip a laptop with a secure software screen disabling solution. For just a few dollars more, the Fleet Manager can have 24 hour online access to the status and operation of all vehicles in his fleet. No longer will the Fleet Manager have to guess at the number of hours the driver worked overtime, a simple check of the online web report will tell the Fleet Manager the exact time the Driver parked the vehicle for the night.

ScreenSafe Licenses Available

ScreenSafe (Standard Edition) – Whether you are an independent owner/operator or a Fleet Manager responsible for thousands of vehicles, ScreenSafe can be installed and fully operational in a matter of minutes. Simply select the operating rules and one or 1,000 drivers can install from the Mobile PC Manager Host License Server.

ScreenSafe with Web Reporting – As a Fleet Manager, you will likely want to view and review consolidated reports on the performance and operation of the vehicles in your company. ScreenSafe with Web Reporting provides this capability. For less than the price of a couple gallons of gas you can have access to all of the online reports 24 hours a day.

Minimum System Requirements

- Windows 2000, 2003, XP, Vista or Windows 7
- 512 MB of memory
- CPU 1.8 or greater
- 20 MB of Hard Drive
- Wireless Communication (*preferred*)
